Porcelain Morphs

This program traces the rapid-change, development of kiln-fired porcelain as a building material. Porcelain has transcended its primary role in construction as a category of tile. It is a basin, a countertop, a partition, it is clads skyscrapers, and it is a veneer for furniture and cabinetry. It paves streetscapes. Historic milestones such as the development of double loaded porcelain, glazed porcelain, and thin slabs are noted and explained. Also examining new technology.
